

Product Information: CorTen-steel planters

Material thickness of Corten-Steel planters is standard 2mm. Production in 3-4 and 5mm is possible.

Corten steel is a metal alloy made of iron which has copper, silicon, nickel and chromium added. When exposed to the weather, it develops a protective layer of rust giving these planters a warm and natural look. The rust layer seals the steel underneath, protecting against further corrosion, making it an extremely long lasting durable product.

Characteristic of Cor-Ten steel is rust orange brown color and longevity.

Advantages:

- Strong / durable.
- Designed to weather.
- Warm, natural look.
- Customization possible.

Optional:

- legs 100x100x90mm height (only for model ANDES).
- Interior Application possible (Optional Interior waterproofing).
- Assembly recessed wheels possible (only in Model ANDES).
- We can provide 'Owatrol' varnish which will stop the item from rusting any further.

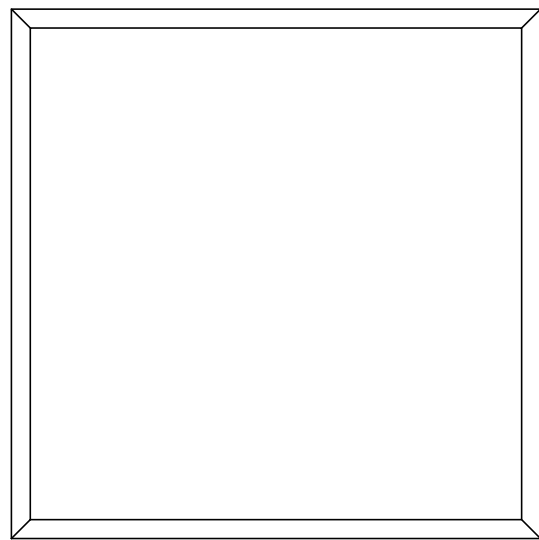

The top edge of the planters is folded twice, which creates a sturdy planter with a timeless appearance.

As standard they come with 15mm feet and drainage holes. It is important that the planter has good drainage and there should be no excess water in the planter. Hydro Grit is not recommended because this product holds water.

Models: Andes, Atlas, Celso and Cado
